# Recovery In Parallel Database Systems 2nd Edition

**disaster recovery with general parallel file system** - disaster recovery with general parallel file system 2.2 estigpfsdrwp082604c 2 abstract the ability to detect and quickly recover from a massive-scale hardware failure is of paramount importance to businesses that make use of real-time data processing systems. general parallel file system (gpfs) provides a **recovery in parallel database systems - springer** - recovery in parallel database systems . database systems edited by thea haerder and andreas reuter in this special book series the interested student or scholar will find leading textbooks and monographs focusing on one of the most prospective areas in the fields of computer science. **parallel database recovery for multicore main-memory databases** - lel), tars is the first parallel recovery mechanism for lightweight command-logging scheme that goes beyond partitioned-dataparal-lelism. specifically, tars innovates with a combination of static and dynamic analyses that enable multiple recovery operations to be parallelized even when accessing the same data shard. **family and personal recovery: a parallel process** - parallel treatment experiences • refer back to the assessment of the patient. family members need the same level of assessment and most of the time the same level of treatment intensity. • residential level of care for families / family members • caron renaissance/ocean drive, on sight, meadows, bridge to recovery **fast databases with fast durability and recovery through ...** - ues), are difficult to recover in parallel. this drive for fast parallel recovery affected many aspects of our log-ging and checkpointing designs. starting with an extremely fast in-memory database, we show: • all the important durability mechanisms can and should be made parallel. • checkpointing can be fast without hurting normal **datasheet ik#15n120h3 - infineon technologies** - recovery anti-parallel diode features: trenchstoptm technology offering • very low vcesat • low emi • very soft, fast recovery anti-parallel diode • maximum junction temperature 175°C • qualified according to jedec for target applications • pb-free lead plating; rohs compliant **mhr simultaneous heat recovery chillers - motivaicorp** - heat recovery the most common and traditional method of recovering heat in a chiller is by using a single heat recovery (water-cooled) condenser, or a secondary heat recovery condenser in parallel with the standard air or water-cooled condenser. using this method, the amount of heat recovered, and the temperature of the hot water can **lecture 17: clock recovery - stanford university** - - low latency/parallel systems use a source synchronous discipline (transmitter clock is sent along with the data) ... mah ee 371 lecture 17 6 oversampled clock/data recovery • oversample the data and perform phase alignment digitally • alternatives range from closed digital loop systems to feed-forward systems ([6]-[9]) **energy recovery - semcohvac** - energy recovery wheel figure 2. typical operating conditions encountered in the cooling and heating mode of a total energy recovery unit. recovering "total energy" semco true 3Å enthalpy exchanger recovers both sensible (temperature) and latent (moisture) energy, and does so far more effectively than other competitive offerings.
